

BALL VALVES FOR GEOTHERMAL APPLICATIONS

TYPE OF VALVES

- Trunnion Valves
- Wedge Gate Valves
- Segmented Valves
- Globe Control Valves
- High Performance Butterfly Valves

4000 Series Anti-Cavitation Trim
Globe Control Valve

DM9900 Live Loaded
Segmented Valve

9500 Series Fully Welded
Trunnion Valve

What is Geothermal Energy?

It is heat from the earth which is clean and sustainable. Geothermal Industry isolates fluids such as Brine, Gas, and Steam. J Flow Controls can be a provider for both valve and automation to geothermal plants including the above valves: Globe Control Valve, Segmented Valves, Trunnion Valves and high Performance Butterfly Valves in sizes 1/4" - 60".

TYPES OF GEOTHERMAL APPLICATIONS	VALVE APPLICATIONS IN GEOTHERMAL PLANTS	ADVANTAGES OF GEOTHERMAL POWER
<ul style="list-style-type: none"> • Hot water • Hot rock found below the earth's surface • Molten rocks which can be found deeper below the earth's surface • Flash steam 	<ul style="list-style-type: none"> • Isolate fluids such as brine, gas and steam • Valves are used in gathering line systems • Injection veil circulating water condensate • Heat transfer fluid production wells 	<ul style="list-style-type: none"> • Environmentally friendly • Provides constant power • Can produce electricity, hot water which can be used directly to heat homes/businesses
